Local Water Security Action Planning Manual

|

Author(s)
Lausevic, Radoje Milutinovic, Slobdan Petersen-Perlman, Jacob Reed, Mark S.

Description / Abstract

This manual is a step-by-step guidebook for practitioners who are developing local water security action plans (LWSAPs) in local communities. The authors have compiled an original methodology comprising seven interrelated activities, some supported by a separate tailored methodology, which cover stakeholder analysis, public opinion assessment, local water security assessment, and problem analysis and prioritisation. Each of the seven activities comprises two or more steps, making a total of 20 steps in the LWSAP process. All 20 steps, and the deliverables related to each one, are described in detail in the manual.
