

Equal Access Participatory Monitoring and Evaluation toolkit

Description / Abstract

This toolkit aims to help communication for development (C4D) organisations to demonstrate the impacts and outcomes of their initiatives, listen to their listeners, continuously learn, and feed this learning back into the organisation and its practices. It is a key outcome of the Assessing Communication for Social Change (AC4SC) project, which was a successful collaboration between Equal Access Nepal, Equal Access International, Queensland University of Technology and the University of Adelaide, Australia.
